

FlexPlay

PLAYGROUND MOUNDS, HILLS & OTHER CREATIONS

Turn your boring playground surfacing into an attractive ground level interactive activity center that brings tons of play value to your playground. Playground mounds are not only aesthetic, but they also improve childrens' motor skills and make daily exercise fun! Kids will love climbing the hills and crawling through the tunnel.

About Our Product:

Utilize a site's natural topography or create a new one and make play more challenging, whether that's creating an entire mountain, adding a tunnel through a mound, or simply adding small mounds that the kids balance and jump from one to the next. Our FlexPlay mounds are great for small spaces that other equipment cannot fit into.

Pro Tip: Playground mounds are great for supervisors to sit on while watching the kids. The height makes a big difference when keeping track of little ones.

Construction Guidelines:

- Avoid placing mounds in path of travel.
- No more than 30% slope.
- Avoid any seams if Synthetic Turf.
- Warranty may be different than surrounding surfacing.
- Seams should be avoided but if required, a vertical step seem should be used.
- Extend at least 6' out around the bottom of mound to avoid slumping and separation at base.
- If in use zone, system depth of mound needs to meet the fall height of nearby equipment.
- Because of the high use and play value of mounds, additional maintenance may be required.
- If a mound is over 5' high, horizontal keyway cut required every 3'-5', at 1"-2" wide by 0.5"-1" deep.
- Depending on the height and diameter of desired mound, shotcrete or concrete form may be required.
- Mounds within the fall zone are 100% rubber and require no form/base. Please consult us prior to finalization of design.
