

FlexTrail™

RUBBER TRAIL SYSTEMS

FlexGround's innovative trail system combines the flexibility of poured-in-place rubber surfacing with the durability of a bonded stone surface. The result is a highly aesthetic, wear-resistant surface engineered for use in high-traffic areas. FlexTrail is perfect for walking trails, bike paths, elevated decking, patios, livable rooftops, golf cart paths, and student pick-up areas.

About Our Product:

FlexTrail can be installed directly over top of existing surfaces with little or no excavation required. Tired of bird baths and puddles forming on or around your existing surface? FlexTrail can be laid at varying depths to assist with retaining, and hiding water so that it can dissipate over time without jeopardizing the safety of pedestrians.
